DETAILED ACTION

Response to Arguments

Applicant's arguments filed on October 17, 2005 have been fully considered but they are not persuasive.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Betti et al. (5,418,494).

Betti et al. (Fig. 4) disclose the claimed invention except voltage-current converter comprises NMOS transistors. Betti et al. disclose a variable gain amplifier comprising: transistors (Q1, Q2), resistor (RE), and current sources (I1, I2) together can

be configured as a voltage-current converter for converting voltages of a wide input range into currents; transistors (Q3-Q6) can be configured as a current shared circuit for receiving the currents from the voltage-current converter and controlling output currents values depending on first and second control voltages (VCONT) to the respective bases of transistors (Q3-Q6); and transistors (Q13-Q14) and resistors (RL1, RL2) can be configured as a current-voltage converter for converting the output currents from the current shared circuit into differential voltages (Vout) depending on voltage (VREF2) which can be read as bias voltage in order to obtain a variable gain, wherein transistors (Q1, Q2) are n-type bipolar transistors not NMOS transistors as claimed. However, the substitution of one well known type of transistor for another would have been obvious in the absence of unexpected results, particularly as both bipolar and MOS transistors are widely used in amplifier circuitries, see column 7, lines 32-42.

Allowable Subject Matter

Claims 3-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 3-8 call for, among others, schematics of voltage-current converter, current shared circuit, and current-voltage converter.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
